EV Sale By Maker

Analysis Remark

Over three years, EV sales grew from **~2.7 lakh to ~10 lakh units**, with penetration rising from **2% to 5%**, delivering a **CAGR of 93.9%**. All time Avg. daily units sold is **~2K**

.

Segment Mix:

- **Two-wheelers dominate** (>90% of sales)
- **Four-wheeler adoption remains slow**, likely due to:
 - Limited policy incentives
 - Inadequate charging infrastructure
 - Consumer preference for ICE vehicles

Regional Trends:

- **West + South zones contribute ~70%** of cumulative sales
- **Top 5 states:**
 - Higher penetration (~6% vs ~4% overall)
 - Contribute **~60% of total sales**

% EV Penetration = EVs Sold units/(EV+ICE) sold units

Remark Regarding Data Set

We currently have separate state-wise and maker-wise datasets. Combining them into a single table with both **Maker** and **State** columns would allow analysis of maker sales trends by state.

Adding fields like **City/District**, **Gender**, **Price**, and **Buyer Age** would further support more comprehensive analysis.
